**HIGH RESOLUTION AERIAL MAGNETIC SURVEY COMPLETED AT  
RED SETTER PROJECT  
PATERSONS RANGES IN WESTERN AUSTRALIA**

Wishbone Gold Plc (AIM: WSBN), the London listed precious metals trading and exploration company, advises that further to the news release date 12 January, Mag Spec Airborne Surveys Pty Ltd have advised that the airborne close spaced high resolution aerial magnetic and radiometric survey on its Red Setter Project, in the Paterson Ranges in Western Australia, has been flown and that the filed data has been checked and uploaded for processing.

When completed this survey will cover the entire Red Setter project area down to a depth of approximately one kilometre. This will provide a considerably more detailed picture of the property than the government survey data which we have had up until now.

Analysis of the processed data will take up to 2-3 weeks.

The 57.4 km<sup>2</sup> Red Setter Project is located approximately 13 km south-west of Newcrest Mining's Telfer Gold Mine and about 60 km west of Newcrest and Greatland Gold's Havieron discovery.

**END**
