Honduras Update

Wishbone Gold Plc, (AIM:WSBN, NEX:WSBN), is pleased to report that the Honduras processing plant is now operational.

Wishbone personnel have visited Honduras several times this year to ensure the project remains on track. The plant is fully operational under a small-scale license and is running batch processing and producing gold while testing various ore samples. Additional licenses have been applied for and are under review, we expect final permitting for large amounts of gold ore in May 2018. This will significantly boost production.

Gold produced from our plant in Honduras will be on show at the UK Investor Show this coming Saturday, 21st April at the Queen Elizabeth Centre II, Broad Sanctuary, Westminster, London SW1P 3EE. Wishbone management will be located on Stand 4.

As previously reported the Honduras operations were delayed by the severe weather conditions last year but during the first quarter we have moved to expand our sources of ore supply as previously stated in our plans for our Honduran operations.
